TOOL IN THE TEST DRIVER

Using the Notepad tool in the test driver

You can use the **Notepad** tool to show how you worked out the answer to a question. This tool can be attached to both computer and human-marked item types.

This article explains how to use the notepad tool to format the content, solve an algebraic equation or problem in the editor.

Opening the Notepad

Open the Notepad toolbar by selecting the  **Notepad** option in a question.

NOTE: By default, the button is named **Notepad**. However, the button name can be renamed by the item author.

Test: HTML_sub Learning 01 **Candidate:** REDDY Srujana

Using algebraic expressions in the editor

The **fx** option lets you insert formulas for solving math problems or equations.

Place the cursor where you want to insert the equation and then select the **fx** option in the Notepad's toolbar to open the **Draft Formula** dialog.

Select the equation or expression you want to add using any of the following options:

Option	Description
Fraction	Represents the fractional value wherein the numerator can be greater than or less than the denominator.
Square root	Solves the square root of a value.
Nth root	Calculates the square root of a number. The n can be cube root, fourth root or fifth root of a number.
Superscript	Sets the character(s) below the line of type. Can be used to calculate the power of first element to the second element.
Subscript	Sets the character(s) above the line of type.
=	Allows to assign a value on the right to the value to the left.
